

Introduction to R and RStudio

Class Materials on NIH Library GitHub

- Visit the [NIH Library GitHub](#) to find class materials for R and Python classes
 - [Intro to R and RStudio class materials](#)

Objectives

- **After completing this training, you will be able to:**
 - Describe the purpose of R and RStudio and learn how it can support reproducible research
 - Define key terms as they relate to R: object, assign
 - Find help and learning resources related to R and RStudio

Elements of this training are from the [Introduction to R episode](#) of the Data Analysis and Visualization in R for Ecologists lesson from Data Carpentry.
(Copyright (c) Data Carpentry)

What is R and RStudio?

What is R?

- **R**: Both the **programming language** and the **software** that interprets the scripts
- A language and environment for statistical computing and graphics
- Source: [What is R?](#) from the R Foundation

What is RStudio?

- **RStudio:** An Integrated Development Environment (IDE) for working with R and Python, distributed by Posit
- [R](#) (recommended 4.4.0 or later) needs to be installed before [RStudio](#)

Why Learn R?

- R doesn't involve lots of pointing and clicking
- R code is great for reproducibility
- R is interdisciplinary and extensible
- R works on data of all shapes and sizes
- R produces high-quality graphics
- R is free, open-source and cross-platform

How Does R Compare? (1)

■ R vs. Python

- R excels in statistical analysis and publication-quality graphics
- Python offers broader general-purpose programming capabilities
- R has more specialized statistical packages; Python has a stronger machine learning ecosystem
- Both support reproducible research with notebooks (R Markdown vs. Jupyter)

■ R vs. SAS

- R is free and open-source; SAS requires expensive licensing
- SAS offers enterprise-level support; R relies on community support
- R's package ecosystem evolves faster than SAS
- R code is more accessible for sharing and collaboration

How Does R Compare? (2)

■ R vs. SPSS:

- R requires more programming knowledge; SPSS has a point-and-click interface
- R offers greater flexibility for custom analyses
- R provides superior data visualization capabilities
- R enables more transparent and reproducible workflows

■ R vs. Excel:

- R handles larger datasets more efficiently
- R provides automated, reproducible analysis workflows
- Excel is more accessible for simple analyses
- R offers more statistical rigor and advanced techniques

When R Shines

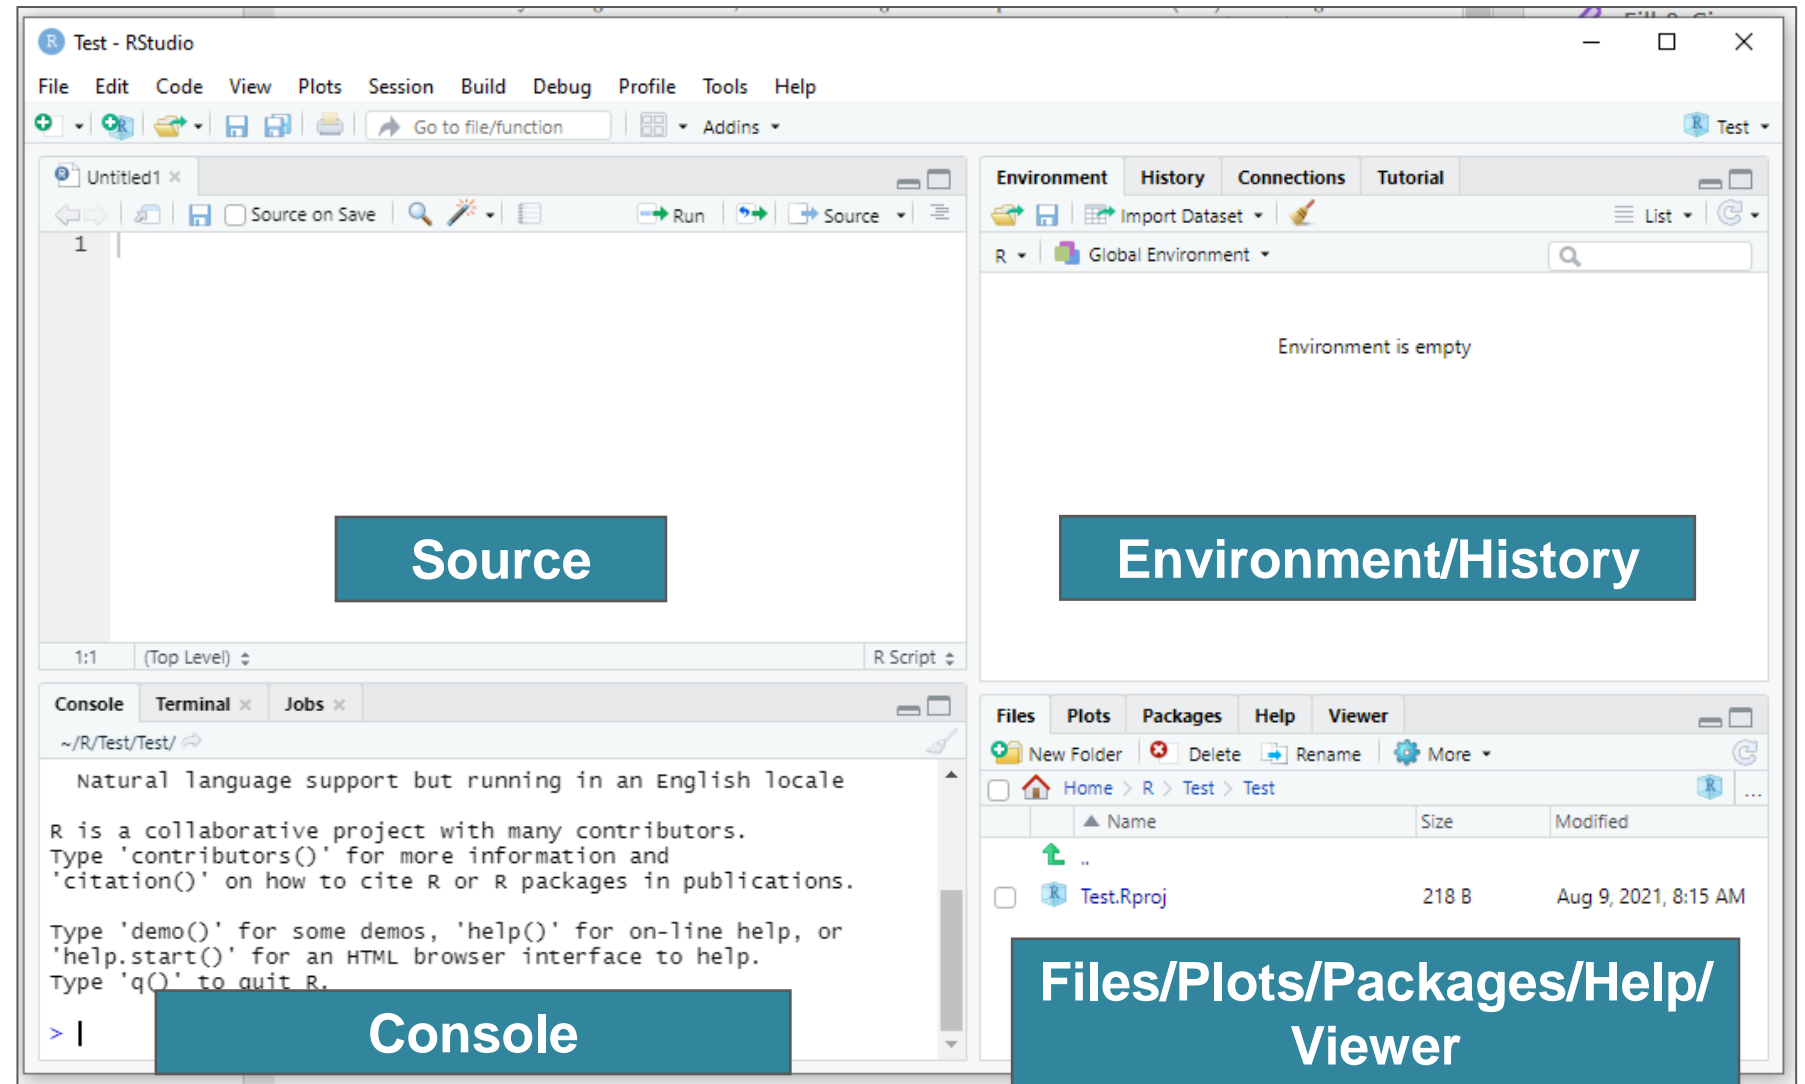

- Complex statistical analyses requiring specialized techniques
- Creating publication-quality visualizations
- Developing reproducible research workflows
- Working in domains with dedicated R packages (bioinformatics, ecology, etc.)
- Situations requiring free, open-source solutions

RStudio Overview

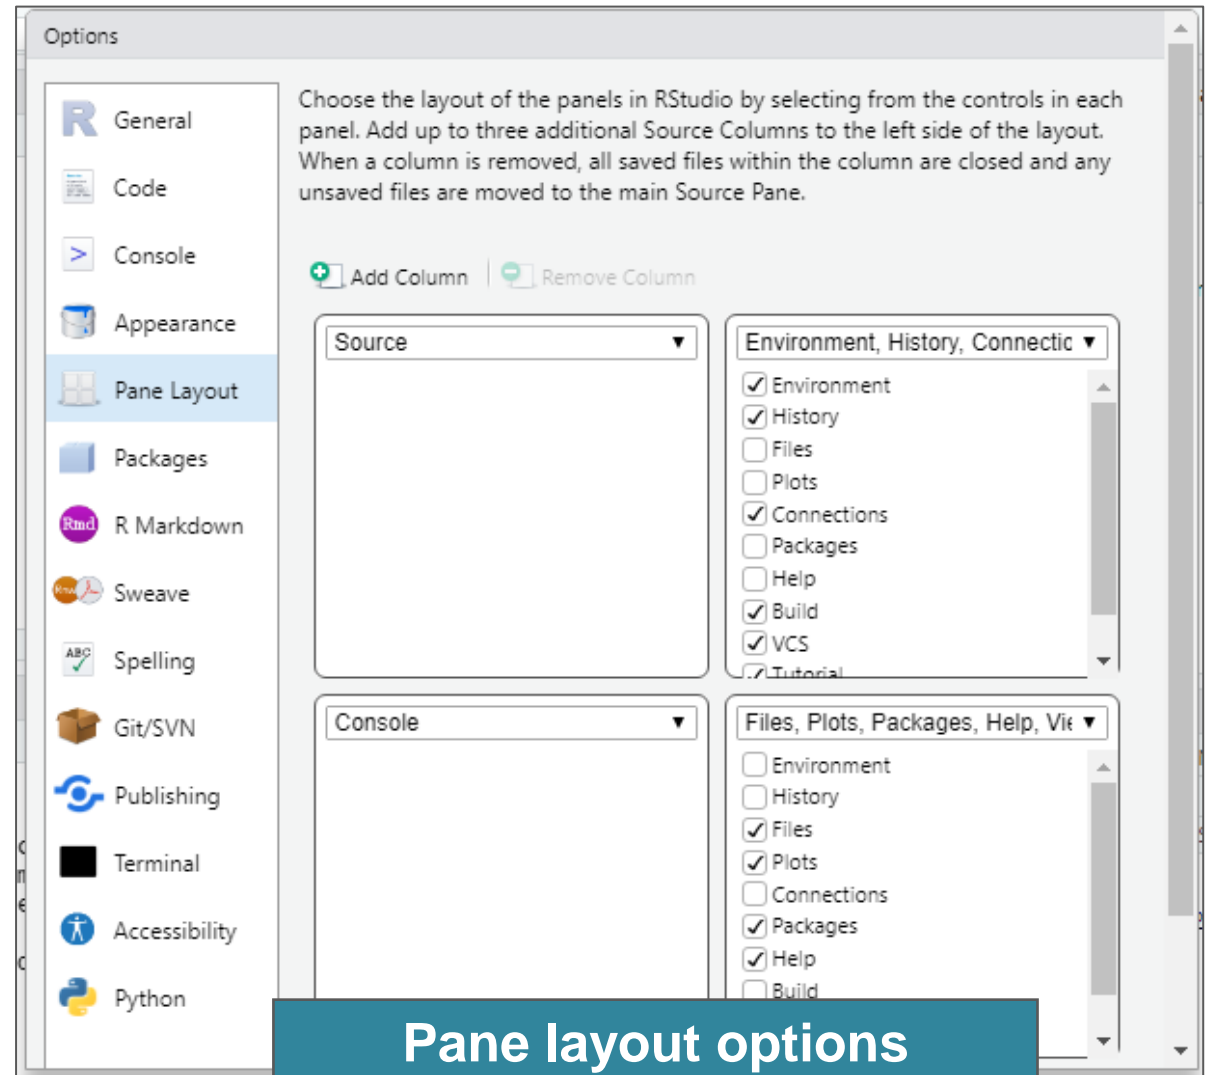

4 Panes of RStudio

- Reference document that includes keyboard shortcuts (PDF): [RStudio IDE Cheat sheet](#)
- Learn about additional [RStudio keyboard shortcuts \(PDF\)](#)

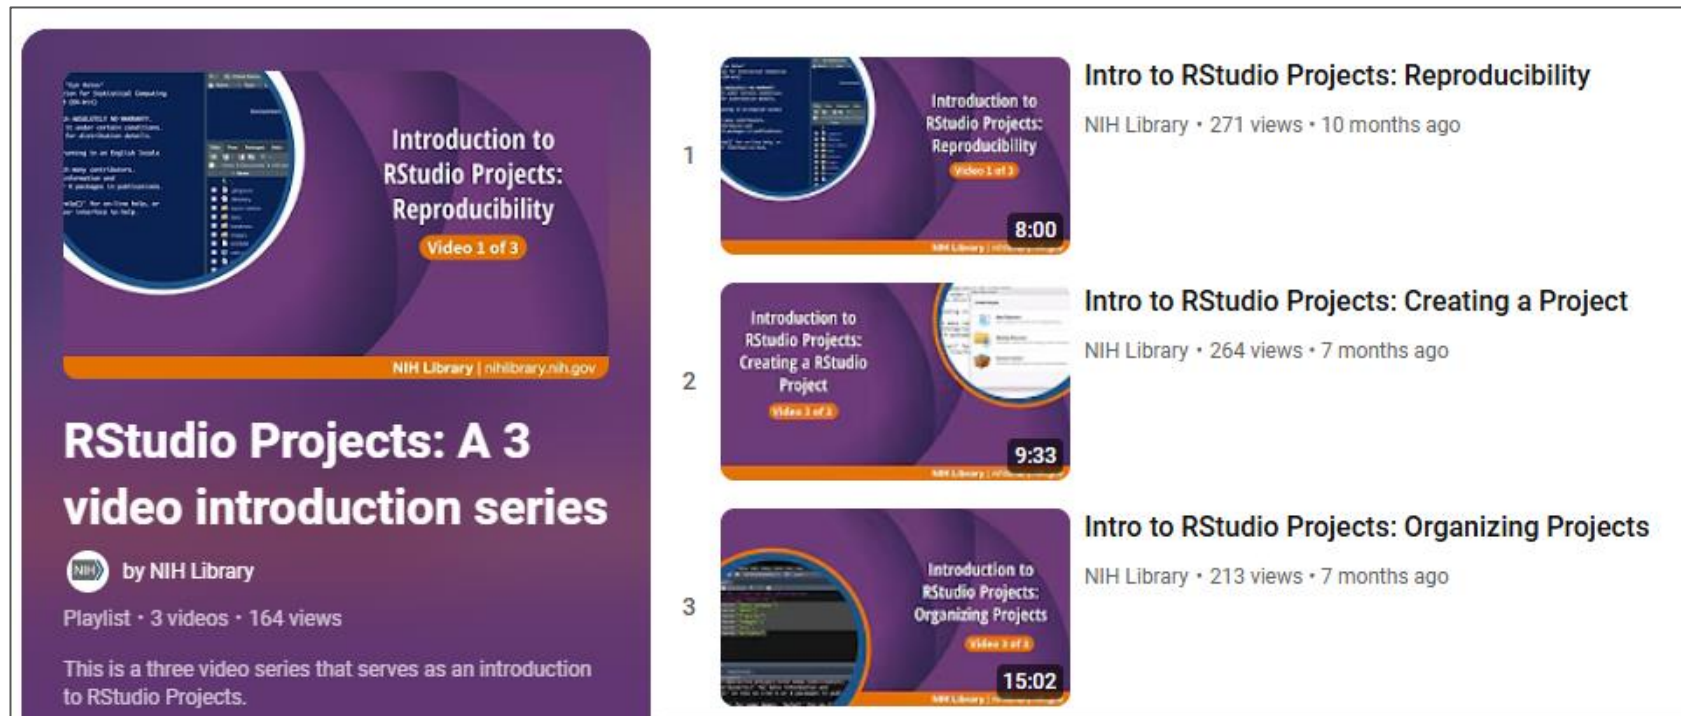

4 Panes of RStudio: Customizing Pane Layout

- The placement of these panes and their content can be customized
 - See menu Tools -> Global Options -> Pane Layout

RStudio Projects

- Watch the on-demand trainings [RStudio Projects: A 3 video introduction series](#) to learn how to create and organize projects in RStudio

Introduction to RStudio Projects: Reproducibility

Interacting with R

Console Pane

- **Console Pane:** Where commands written in the R language can be typed and executed immediately
 - Type commands directly into the console and press Enter to execute those commands
 - Commands will be forgotten when you close the session

The screenshot shows the R console window with tabs for Console, Terminal, and Jobs. The console output displays the R version (3.6.3), copyright information, and platform details. It also includes a welcome message and instructions on how to use the console. The command `> sin(1)` has been entered, and the output `[1] 0.841471` is shown. The prompt `> |` is visible at the bottom.

```
R version 3.6.3 (2020-02-29) -- "Holding the windsock"
Copyright (C) 2020 The R Foundation for Statistical Computing
Platform: x86_64-w64-mingw32/x64 (64-bit)

R is free software and comes with ABSOLUTELY NO WARRANTY.
You are welcome to redistribute it under certain conditions.
Type 'license()' or 'licence()' for distribution details.

Natural language support but running in an English locale

R is a collaborative project with many contributors.
Type 'contributors()' for more information and
'citation()' on how to cite R or R packages in publications.

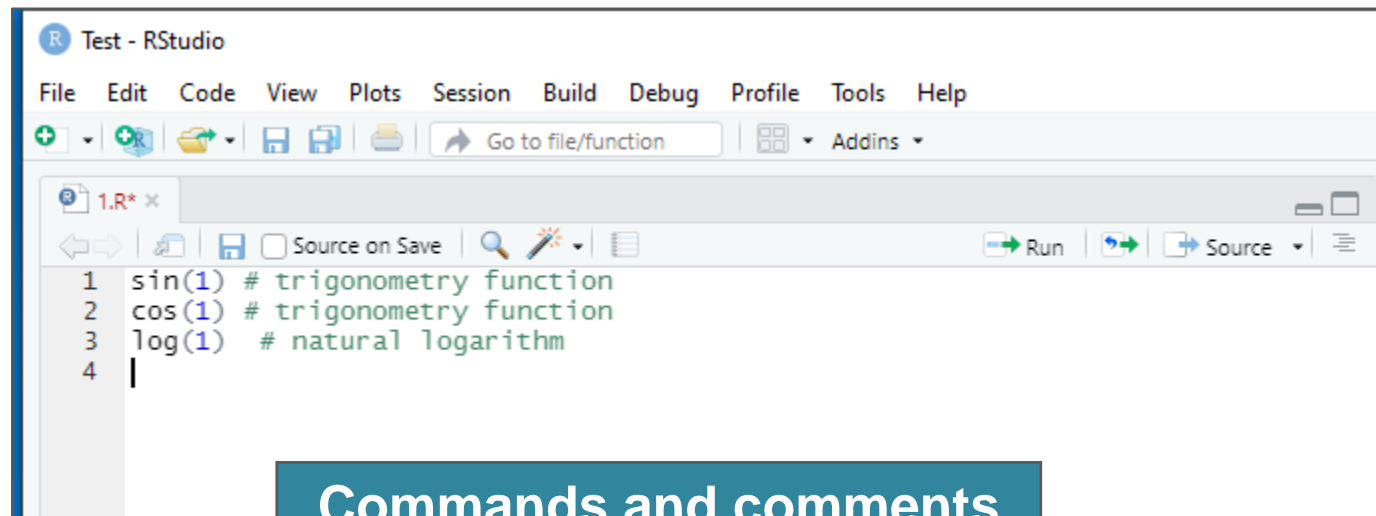

Type 'demo()' for some demos, 'help()' for on-line help, or
'help.start()' for an HTML browser interface to help.
Type 'q()' to quit R.

> sin(1)
[1] 0.841471
> |
```

**Executing a command in the
R console**

Script Editor

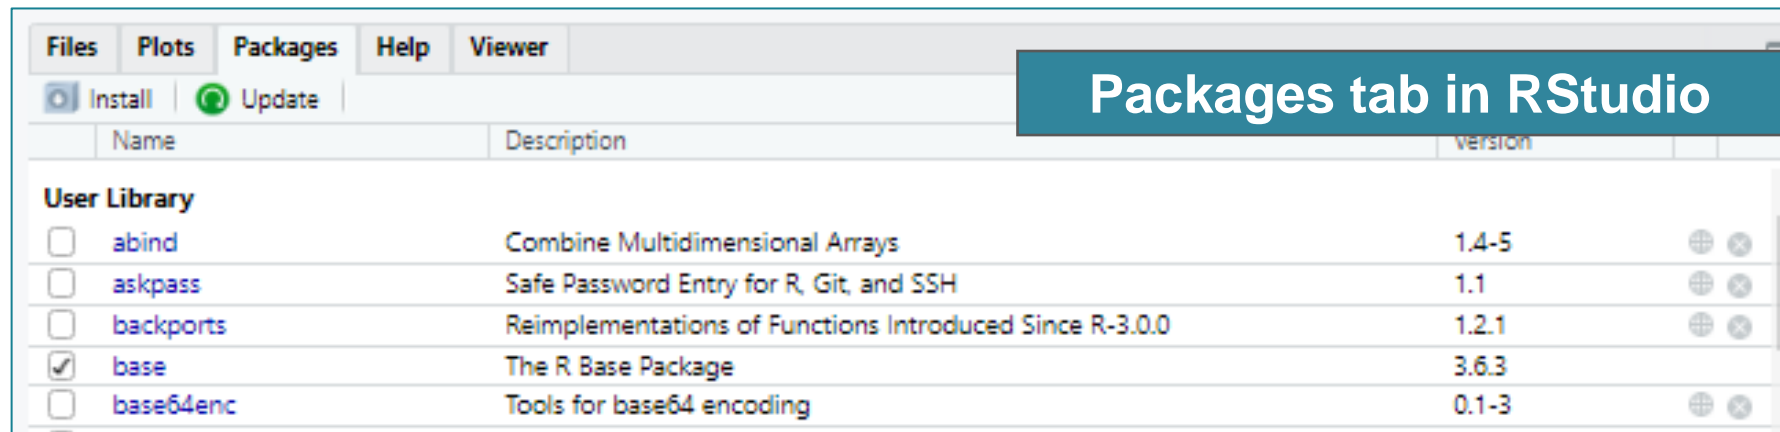

- **Script Editor:** Type commands in script editor to run and save the script
 - Makes code easy to replicate later

Commands and comments
in script editor

R Packages

- Use packages to add functions to R
 - Over 22,000 packages available on [the Comprehensive R Archive Network \(CRAN\)](https://cran.r-project.org/)
 - Choose **Packages tab** in RStudio to view installed packages, install new packages, update packages, and make a package available for use
 - Choose the checkmark beside an installed package or enter **library(packagename)** in the console to make a package available for use

Key R Terms

Creating Objects in R and Assigning Value

- R uses **object-oriented programming**
- What are known as **objects** in R are known as **variables** in many other programming languages
- Assign **values** to objects
- To create object, give it a name followed by **assignment operator** `<-` (shortcuts: Alt + - (Windows) or Option + - (Mac)) , and then the value

```
> weight_kg <- 55  
> |
```

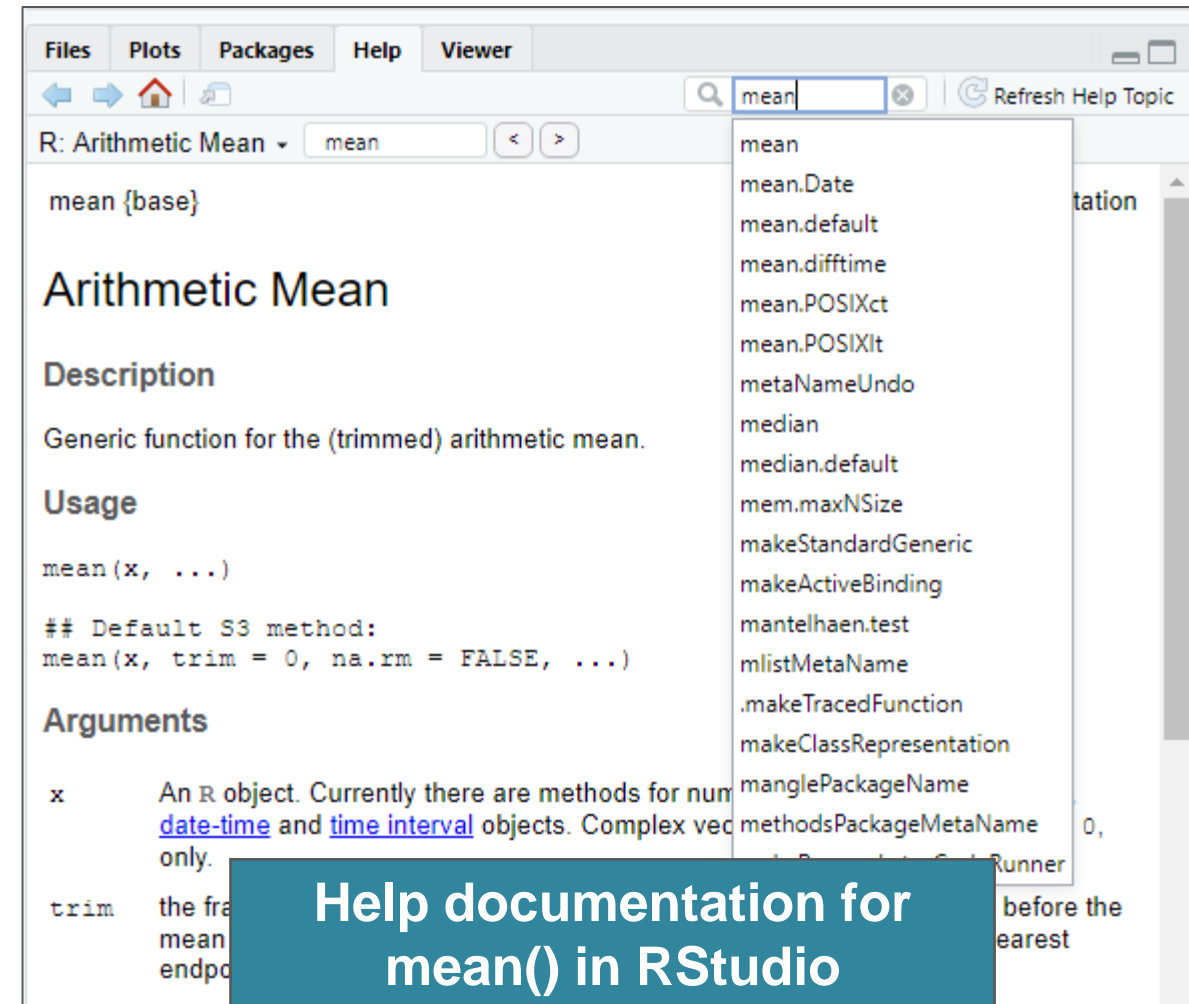

Assigning value 55 to the
object weight_kg

Getting Help

RStudio Help Interface

- **Help menu in RStudio:**
Lower right pane (under Help tab)
- Search for help topics
- Alternatively, use command **?functionname** to find help information on a specific function
 - Use **??** To search available help pages

Finding Help Information Online

- Try search of [RDocumentation](#): Searches all R packages on CRAN and Bioconductor
- Browse [CRAN package repository](#): Find reference manuals and vignettes
- **Google search**: Try “R [task]”, or try searching the error message and function or package name
- Check **Stack Overflow** and [search using the \[r\] tag](#)
- Search [Posit Community forums](#)

Getting Help from the R User Community

- Best practices to request help from R user community (on Stack Overflow, Posit Community forums, etc.):
 - Use the correct words to describe your problem, and be precise
 - Provide raw file and script up to the point of the error, when possible
 - Save R object to file, i.e.:
`saveRDS(weight_kg,
file=~ /Demo/weight_kg.rds")`
 - Always include the output of **sessionInfo()**

```
> sessionInfo()
R version 3.6.3 (2020-02-29)
Platform: x86_64-w64-mingw32/x64 (64-bit)
Running under: windows 10 x64 (build 18363)

Matrix products: default

locale:
 [1] LC_COLLATE=English_United States.1252
 [2] LC_CTYPE=English_United States.1252
 [3] LC_MONETARY=English_United States.1252
 [4] LC_NUMERIC=C
 [5] LC_TIME=English_United States.1252

attached base packages:
[1] stats      graphics  grDevices  utils      datasets  methods   base

loaded via a namespace (and not attached):
[1] compiler_3.6.3 tools_3.6.3  yaml_2.2.1
> |
```

Output from sessionInfo()

Getting Help from the R User Community: More Resources

- [Posting Guide: How to ask good questions that prompt useful answers](#) (The R Foundation)
- [How to Ask for R Help](#) (Revolutions blog)
- [A blog post by Jon Skeet](#): Advice on how to ask programming questions
- The [reprex package](#): Create reproducible examples when asking for help (see presentation from [rOpenSci Blog](#))

Resources to Learn More about R

- [An Introduction to R](#) (PDF) (and other manuals, FAQ, and R Journal available through cran.r-project.org)
- [Finding Your Way to R](#) (RStudio Education from Posit)
- [R for Reproducible Scientific Analysis](#) (from Software Carpentry)
- List of online books for learning R in [NIH Library catalog](#)
- Communities to join for learning R and data science at NIH:
 - [NIH Data Science Microsoft Team](#)
 - [NIH-DATASCIENCE-L](#)

Wrap-Up

- R is a language for statistical computing and graphics, with RStudio Integrated Development Environment from Posit
- R is great for reproducibility
- R is extensible through over 22,000+ packages
- In RStudio, type commands in the script editor to run and save the script
- Find help resources built into RStudio, through sites like RDocumentation, or ask for help through various online forums
